PRODUCT CONCEPT / INDmoney

US stock transfer

status clarity, without the guesswork

A proposed experience that makes a delayed transfer easier to understand and gives users a clearer next step.

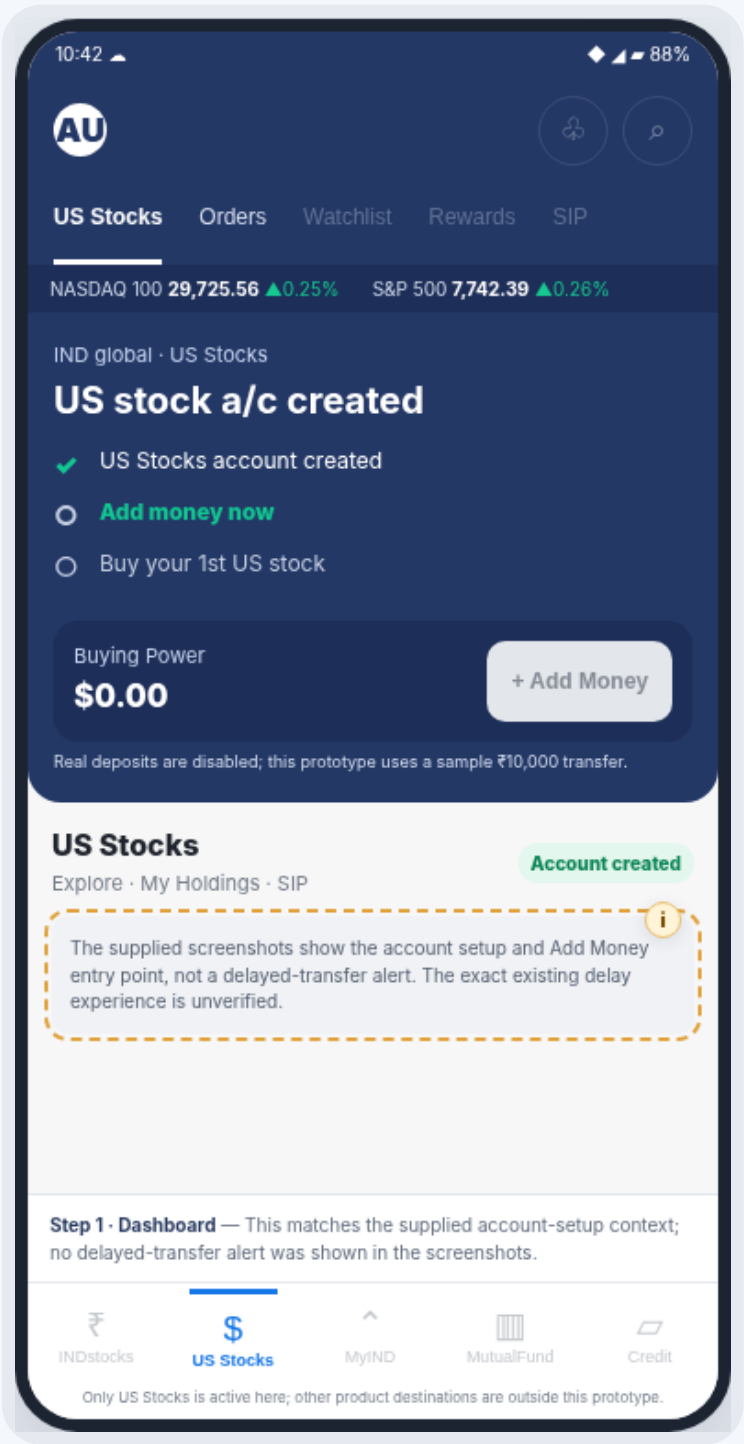

THE PROBLEM

When a transfer is delayed, users may not know its status, what caused the delay, or what to do next.

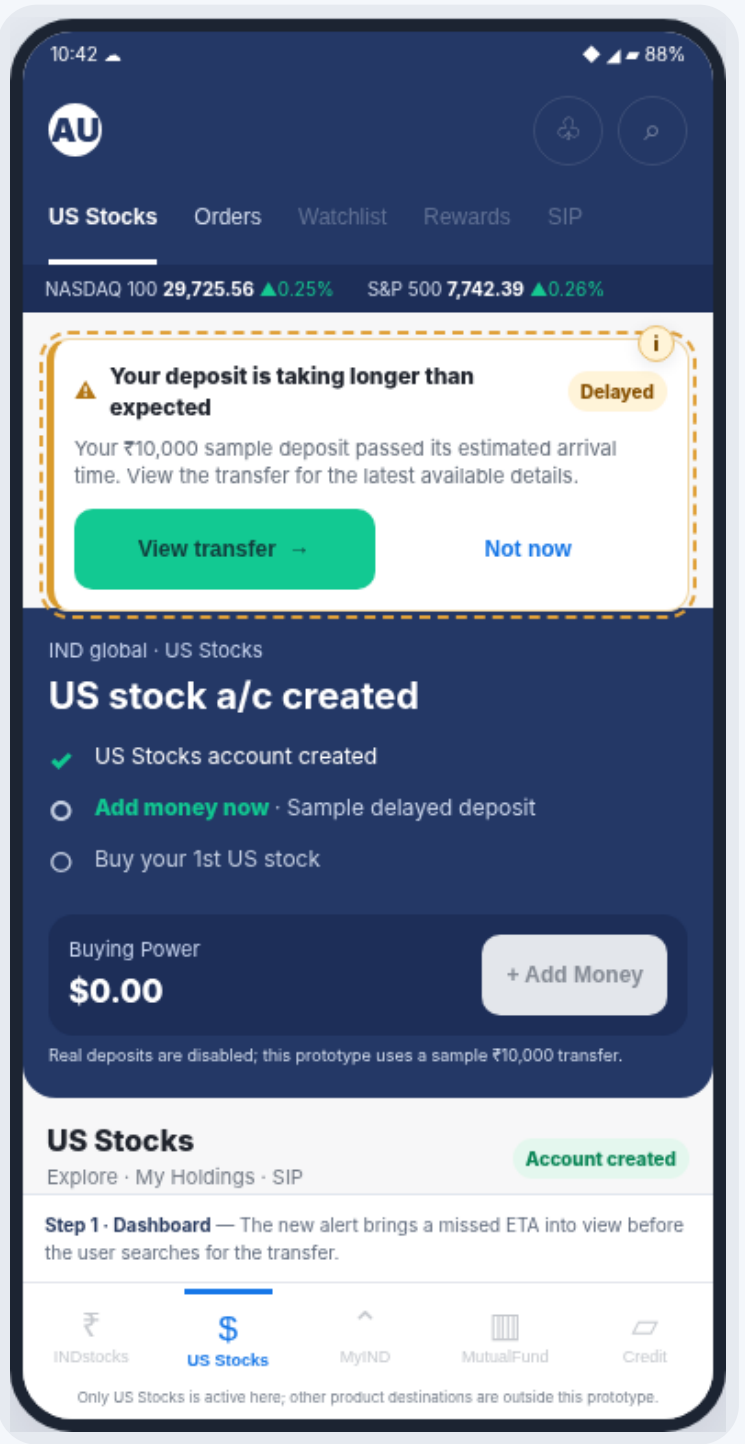

THE PROPOSED CHANGE

Show a clear status, a plain-language explanation, a progress view, and a relevant support path.

BEFORE → AFTER

Current dashboard

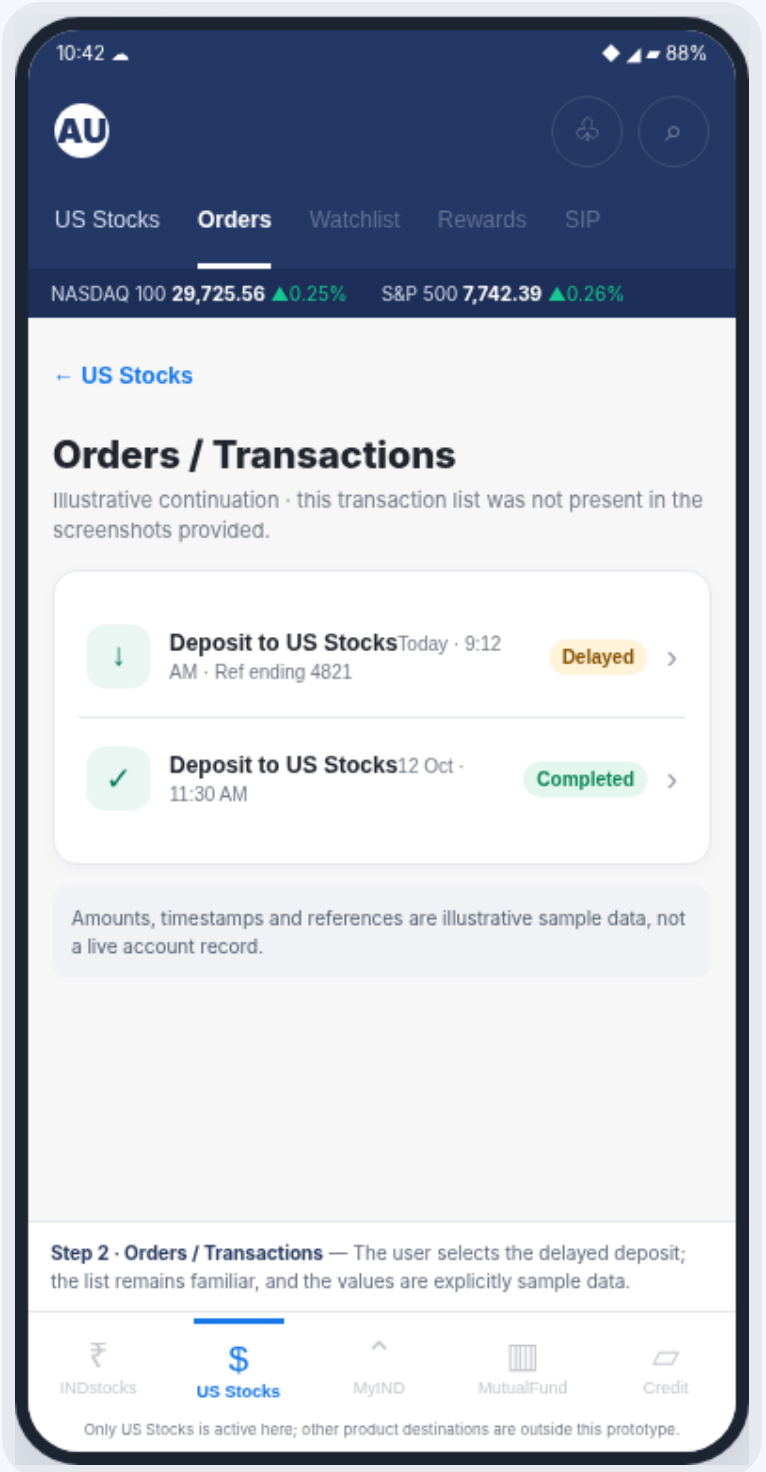

Proposed dashboard

THE FLOW

From uncertainty to a next step

01 TRANSFER HISTORY

A familiar place to check the transfer and understand its current state.

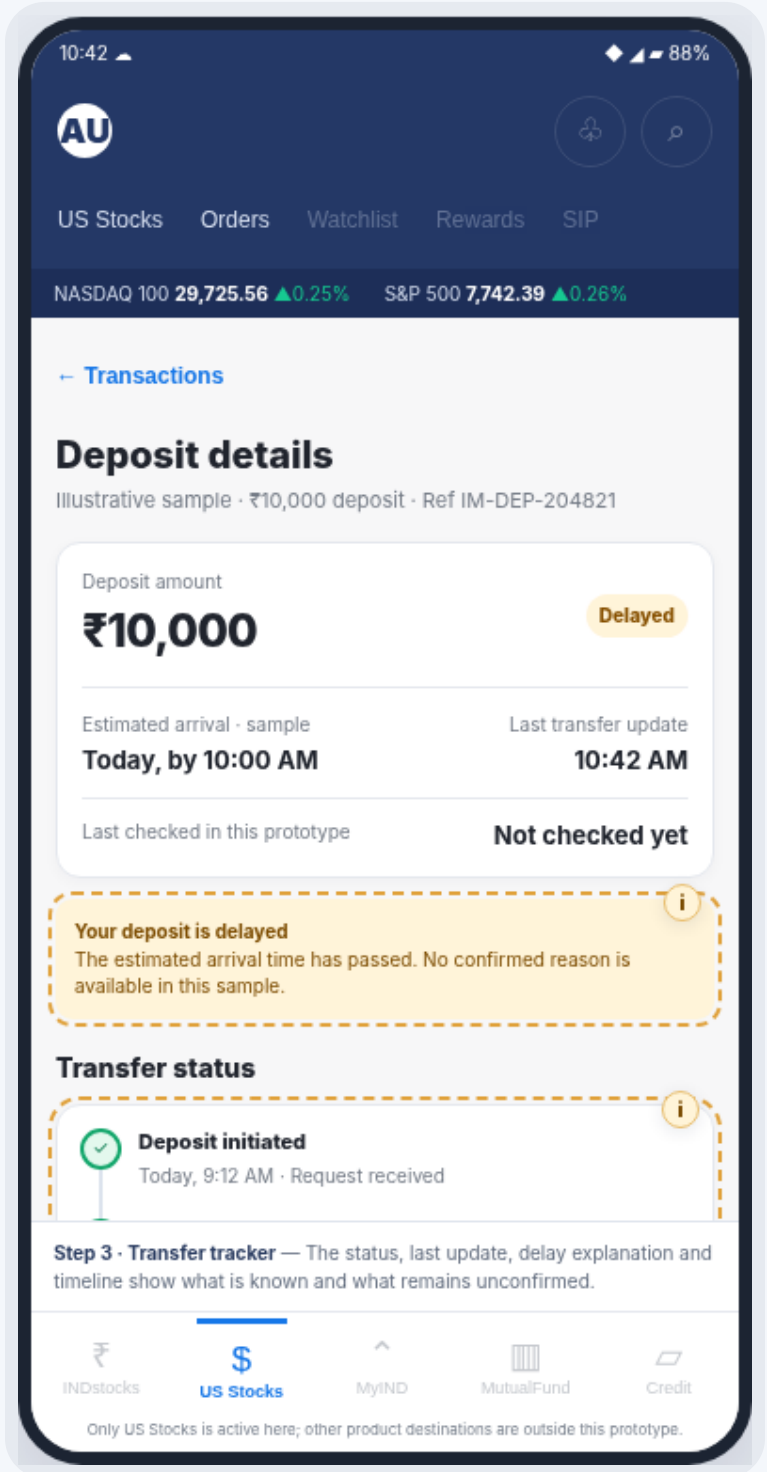

What this adds

A visible progress summary and a clear action to continue the deposit flow.

02 TRANSFER TRACKER

A dedicated view that explains what has happened and what comes next.

What this adds

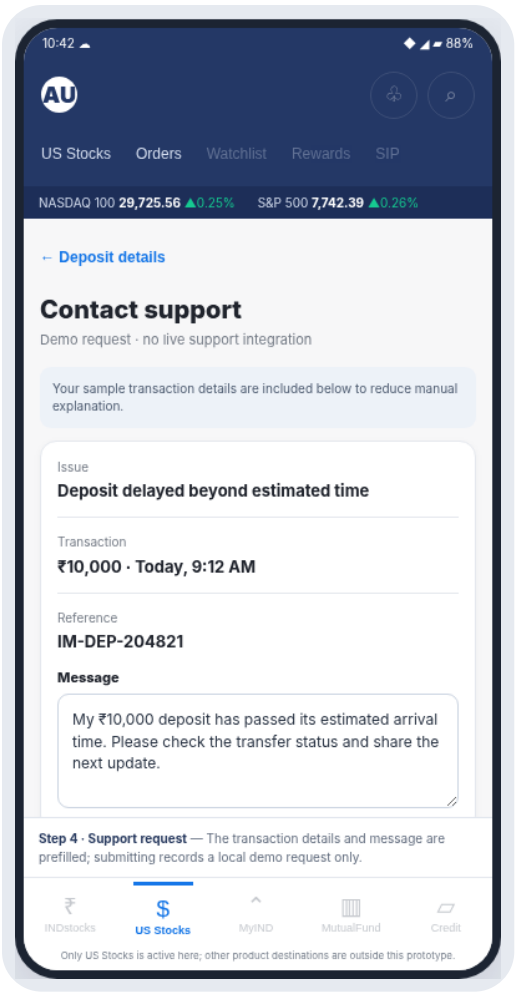

A step-by-step status view that reduces the need to guess or repeatedly check.

DECISIONS & MEASUREMENT

Helpful, measurable, and honest

03 SUPPORT WHEN NEEDED

If the transfer is delayed or unclear, users can see a relevant support option from the flow.

Design principle

Explain first; offer help when the user needs it.

SUCCESS METRIC

–20%

target reduction in transfer-related support requests

Illustrative target only — not a measured result. Validate against a baseline after launch.

TRADE-OFF

More status detail can create false confidence if updates are stale or inaccurate.

The concept should only show confirmed status and clearly label estimates.

WHAT I BUILT

A clickable front-end concept with before/after comparison, transfer history, a step-by-step tracker, a support path, annotations, and sample states.

SCOPE NOTE

This is a prototype using sample data, not a live INDmoney feature; no real transfer, support ticket, or production metric is connected.

Product thinking: problem framing • flow design • edge cases • metric hypothesis
